

ROVONN RUSSELL

The Founder's Prompt Codes.

*30 commands that work in ChatGPT, Claude,
and any modern AI tool.*

rovonnrussell.com

How to use this

Six pages. Two minutes. Save hours.

These prompt codes work in any modern AI tool. They're not platform-specific commands. They're shorthand the model recognizes from context.

Some are universal patterns (TRUTHMODE, 80/20, REDTEAM). Others are branded codes (FOUNDERMODE, ADAPTMODE) that work best when you set them up once. Either way, set up takes two minutes and the codes save you hours every week after that.

For ChatGPT users

1. Open ChatGPT → Settings → Personalization → Custom Instructions.
2. Copy the Definitions Cheat Sheet on page 6 into the "How would you like ChatGPT to respond?" field.
3. Any code now works automatically in any chat.

For Claude users

1. Go to a Claude Project → Project Knowledge → Add files.
2. Upload this PDF as a project file.
3. The codes work automatically in any conversation in that project.

For one-off use

At the top of any conversation, paste: *"I'm going to use prompt codes from a guide. When I type a code in all caps followed by a colon, here's what each one means: [paste the cheat sheet]."*

That's it. Two minutes to set up. Hours back every week from here on.

30 commands.

Eight categories.

Each code below has the command, a short description, why founders care, and a real example of how to use it. Read straight through, or jump to the category you need.

STRATEGY + THINKING

TRUTHMODE :

Stop being polite. Tell me what's weak, unclear, or unrealistic about my plan.

Why founders care: You don't need more encouragement. You need clearer thinking.

Example – TRUTHMODE: my new offer isn't converting. What am I missing?

80/20 :

The simplest, highest-leverage path. What 20% of effort produces 80% of the result?

Why founders care: You're busy. You don't need 27 options. You need the one move that matters.

Example – 80/20: which of my 12 marketing channels actually drive revenue?

REDTEAM :

Attack this idea before the market does. Find risks, objections, blind spots.

Why founders care: Helps you find weak spots before wasting money, time, or team energy.

Example – REDTEAM: I'm raising prices 30% next quarter. Tear it apart.

BOTTLENECK :

What's the actual constraint in my business right now?

Why founders care: Most founders treat symptoms because they can't see the real bottleneck.

Example – BOTTLENECK: revenue's flat. What's actually slowing growth?

ONE - MOVE :

If I could only do one thing this week, what is it?

Why founders care: You have 40 priorities and 40 hours. You need a forcing function.

Example – ONE-MOVE: I have 12 projects open. What's the one thing that matters?

FOUNDERMODE :

Answer like you're a busy founder with limited time, limited money, real operations.

Why founders care: Most AI advice is too generic. This makes it grounded.

Example – FOUNDERMODE: should I hire a VA or use AI for client intake?

TIME + EXECUTION

TIMEBACK :

Find ways to save hours. Reduce the founder bottleneck.

Why founders care: Time is the most universal founder pain.

Example – TIMEBACK: my admin work takes 12 hours a week. Where can AI cut that?

DELEGATE :

Which parts of this can I hand off to AI?

Why founders care: You're doing too much yourself.

Example — DELEGATE: here's my weekly task list. What can AI handle?

AUTOMATIONMAP :

What can be automated, delegated, or simplified in this work?

Why founders care: Surfaces opportunities you can't see when you're in the work.

Example — AUTOMATIONMAP: walk through my client onboarding process.

WORKFLOWMODE :

Turn a messy process into a clean workflow.

Why founders care: Eliminates ambiguity in repeatable work.

Example — WORKFLOWMODE: design my client intake from inquiry to project start.

EXECUTIONMODE :

Build a step-by-step action plan.

Why founders care: Cuts through analysis paralysis.

Example — EXECUTIONMODE: I want to launch a course in 30 days. What's the plan?

MONEY + MARGIN

MARGINLENS :

Show me how this saves money, protects profit, or reduces waste.

Why founders care: Margin is squeezed. Every move needs to defend it.

Example — MARGINLENS: should I switch from contractor X to AI workflow Y?

RUNTHENUMBERS :

What's the real ROI? Show me the math.

Why founders care: Stops you from buying tools that don't pay for themselves.

Example — RUNTHENUMBERS: a \$2K/mo SaaS. Does it pay back?

KILL - IT :

What should I stop doing or paying for?

Why founders care: Subtraction is harder than addition. AI helps you see what to cut.

Example — KILL-IT: review my tool stack and tell me what to kill.

PRICED - RIGHT :

Is my pricing correct, or am I leaving money on the table?

Why founders care: Most small businesses underprice.

Example — PRICED-RIGHT: my Advisory is \$2K/mo. Should it be higher?

CUSTOMER

CLIENTLENS :

Look at this from my customer's point of view.

Why founders care: Stops you from designing offers from inside your own head.

Example — CLIENTLENS: my customer is comparing me to 3 competitors. What's going through their head?

OBJECTIONS:

List every reason they'd say no.

Why founders care: Surfaces sales blockers before the sales call.

Example — OBJECTIONS: I'm pitching a founder on Advisory. What pushback will come up?

MAKEITSELL:

Make this copy or positioning more persuasive without sounding hypey.

Why founders care: Most founders write copy that's accurate but doesn't convert.

Example — MAKEITSELL: rewrite my home page hero to actually convert.

VOICE + CRAFT

VOICELOCK:

Keep the writing aligned to my voice and tone (best when you've shared voice samples).

Why founders care: AI tends to flatten your brand voice. This prevents that.

Example — VOICELOCK: draft this LinkedIn post in my voice (samples above).

HUMANIZE:

Make this sound like a real person wrote it.

Why founders care: AI patterns kill conversion. Humanizing them restores it.

Example — HUMANIZE: this email sounds robotic. Fix it.

SLOPWATCH:

Find where this AI output sounds generic, fake, or low-quality.

Why founders care: You can't always see the slop in your own output. AI can.

Example — SLOPWATCH: review this caption I drafted. What sounds AI-written?

NOFLUFF:

Remove filler. Give only what matters.

Why founders care: Most AI output is padded. NOFLUFF cuts it.

Example — NOFLUFF: explain ADAPT in 100 words.

HOOKMODE:

Create stronger hooks for videos, posts, and emails.

Why founders care: Hooks decide whether anything else gets read.

Example — HOOKMODE: 5 hook variations for a post about Saturday founders.

DECISIONS

DECIDE:

Force one recommendation. No hedging.

Why founders care: AI defaults to balanced. Founders need conviction.

Example — DECIDE: Playbook or Diagnostic for my next lead magnet?

TRADEOFFS:

Name them explicitly. What am I giving up with each option?

Why founders care: Every decision has hidden costs.

Example — TRADEOFFS: ship now vs polish two more weeks.

BUYORBUILD :

Should I buy this tool or build my own version?

Why founders care: Most founders default to buy when they should build (or vice versa).

Example – BUYORBUILD: I need a client portal. Buy SaaS or build custom?

CONTENT FORMATS

REELMODE :

Turn this into a short-form vertical video script.

Why founders care: Output is ready to film, not just an idea.

Example – REELMODE: turn this blog post into a 60-sec Reel script.

CAROUSELMODE :

Turn this into a LinkedIn or Instagram carousel, slide by slide.

Why founders care: Different format, same content. Fast repurposing.

Example – CAROUSELMODE: turn the 5 outcomes into a LinkedIn carousel.

LINKEDINMODE :

Turn this into a thoughtful LinkedIn post.

Why founders care: Different platforms need different shapes.

Example – LINKEDINMODE: take my blog post and turn it into a LinkedIn post.

ON-BRAND

ADAPTMODE :

Show me how to fit AI into my actual business. Don't give me a list of tools, show me what to do.

Why founders care: Most AI advice is generic. ADAPTMODE makes it specific to your business.

Example – ADAPTMODE: I run a 6-person agency. What's the first AI workflow to install?

Copy. Paste. Use forever.

This is the page to copy into your ChatGPT Custom Instructions or Claude Project Knowledge. Once it's in there, every code below works automatically in any conversation.

TRUTHMODE :	Direct feedback. Challenges weak thinking. No diplomacy.
80/20 :	Highest-leverage action with the least wasted effort.
REDTEAM :	Find risks, objections, blind spots, failure points.
BOTTLENECK :	Identify what is actually slowing the business down.
ONE - MOVE :	The single highest-leverage thing to do this week.
FOUNDERMODE :	Answer like a busy founder with real constraints.
TIMEBACK :	Find ways to save hours and reduce founder bottlenecks.
DELEGATE :	Which parts can be handed off to AI?
AUTOMATIONMAP :	What can be automated, delegated, or simplified.
WORKFLOWMODE :	Turn a messy process into a clean workflow.
EXECUTIONMODE :	Build a step-by-step action plan.
MARGINLENS :	Show how this saves money, protects profit, reduces waste.
RUNTHENUMBERS :	Show the real ROI math.
KILL - IT :	What should I stop doing or paying for?
PRICED - RIGHT :	Is my pricing correct or am I leaving money on the table?
CLIENTLENS :	Look at this from my customer's point of view.
OBJECTIONS :	List every reason they'd say no.
MAKEITSELL :	Make this copy more persuasive without sounding hypey.
VOICELOCK :	Keep writing aligned to my voice and tone.
HUMANIZE :	Make it sound like a real person wrote it.
SLOPWATCH :	Find where the output sounds generic, fake, low-quality.
NOFLUFF :	Remove filler. Give only what matters.
HOOKMODE :	Create stronger hooks for videos, posts, emails.
DECIDE :	Force one recommendation. No hedging.
TRADEOFFS :	Name them explicitly. What am I giving up?
BUYORBUILD :	Should I buy this tool or build my own?
REELMODE :	Turn this into a short-form vertical video script.
CAROUSELMODE :	Turn this into a carousel, slide by slide.
LINKEDINMODE :	Turn this into a thoughtful LinkedIn post.
ADAPTMODE :	Fit AI to my actual business; don't list tools, show actions.

When you're ready for more

Two next moves.

The codes save you hours. The two assets below help you build the business the time goes into.

FOR FOUNDERS WHO WANT A PERSONAL FIRST MOVE

The Edge.

A 90-second form. Five questions about your business. Within 24 hours, I write back personally with a custom blueprint on the first AI workflow I'd install in your business this week.

rovonnrussell.com/the-edge

FOR FOUNDERS WHO WANT THE FULL FRAMEWORK

The ADAPT Playbook.

A 25-page guide. The framework, the five outcomes, ten specific workflows, and the first 30 days. Free download. The workflow you'll need next is probably in there.

rovonnrussell.com/resources/adapt-playbook

Most founders are adopting AI. Almost none are ADAPTING it. The codes in this guide are a small piece of how I help founders close that gap. If you want the rest, the two doors above are open.

Don't just adopt AI. ADAPT it.

— Rovonn
