

A FREE RESOURCE

The Visibility *Starter Kit.*

*A practical kit for turning your ideas, work, and
expertise into content people understand and act on.*

By **Rovonn Russell**

rovonnrussell.com

HOW TO USE THIS KIT

If you have something to say, this is how you *say it twice a week.*

This kit exists because most people don't have a content problem. They have a capture problem.

You're already doing the work. Clients, projects, conversations, lessons, surprises, hard moments, small wins. The raw material is there. What's missing is a system for turning that material into content people can understand and act on.

That's what's inside. Five sections. Read it cover to cover, or pull out the part you need this week. Either works.

Save the prompts as custom GPTs or Claude projects. Print the worksheet. Pin the weekly system somewhere you'll see it on Sunday. The kit is meant to live next to your work, not on a shelf.

WHAT'S INSIDE

01 10 AI prompts that actually work	p. 4
02 5 content angles for finding stories in your work	p. 15
03 Event-to-content checklist	p. 20
04 A weekly content system that doesn't burn you out	p. 21
05 Story capture worksheet	p. 22
06 Where it lives: a platform breakdown	p. 23
07 Visual capture supplement	p. 24

01

Ten AI prompts that actually work.

*The exact prompts that turn AI from a search engine
with typos into something that thinks alongside you.*

Most AI prompts are generic. These ten aren't. Each one is built for a real moment in a real content workflow: clarifying a message, finding angles, turning a voice memo into a post, restoring your voice after a draft has gone sideways.

Copy them as-is. Save the ones that work as custom GPTs, Claude projects, or system prompts you reuse. The thirty seconds you spend setting one up returns hours every week.

Prompt One

The Strategic Partner.

Anytime AI feels generic. This is the prompt that turns a tool into a thinking partner.

THE PROMPT

"Act as a strategic partner. Help me clarify, simplify, and amplify this message for [my audience].

Here's what I'm trying to say: [your message]

Here's who needs to hear it: [your audience]

Push back where I'm being unclear, lazy, or off-brand."

EXAMPLE

Input: "I want to write a LinkedIn post about how I redesigned our agency's hiring process."

Output: Three angles: the contrarian take, the lessons-learned take, the practical breakdown. Each with a hook, a structure, and a one-line read on who it would resonate with.

TIP

Save it once, reuse it forever. *Make this a custom GPT, a Claude project, or a system prompt in your tool of choice. The thirty seconds you spend setting it up returns hours every week.*

Prompt Two

The Story Angle Generator.

When you have one piece of work and want five posts out of it without repeating yourself.

THE PROMPT

"I just [describe what happened]. Help me find five different content angles I could post about this.

For each angle, give me: the angle in one line, who it's for (creator, founder, leader, etc.), a hook I could open with, and the takeaway someone should leave with."

EXAMPLE

Input: "I just shipped 15 AI agents for my agency and not all of them worked."

Output:

1. **The math angle.** 90% × 5 calls = 59% (for builders)
2. **The unlearn angle.** 3 mistakes I dropped (for technical founders)
3. **The contrarian angle.** Most agent advice is wrong (for product people)
4. **The lesson angle.** What I'd tell agent #1 (for new builders)
5. **The result angle.** The 3 agents I'd build first (for time-strapped operators)

TIP

Test the angles for surprise. *If they all sound like the same idea wearing different hats, paste them back and ask: "What's the most surprising angle in here, and how could it be sharper?"*

Prompt Three

The Voice Memo to Post.

*When the ideas are in your head but writing them out feels like a tax.
Speak first, edit later.*

THE PROMPT

"Below is a transcript of me talking out loud about [topic].

Turn it into a [LinkedIn post / blog draft / email] that:

- Keeps my voice (don't make it formal)
- Cuts the filler ('um', 'like', 'you know', false starts)
- Tightens the structure: hook, body, close
- Preserves anything that sounds like a quote

Transcript: [paste the transcript]"

EXAMPLE

Input: 90 seconds rambling about why nonprofit storytelling fails.

Output: A 220-word LinkedIn post with a strong opening line, three punchy body paragraphs, and a close that lands.

TIP **The transcript doesn't need to be clean.** Use Otter, the iOS Voice Memos app, or your phone's voice-to-text. The prompt is what cleans it up.

Prompt Four

The Headline Tester.

When you have a piece of content and aren't sure which angle should lead.

THE PROMPT

"I'm writing a piece about [topic]. Give me ten different headlines for it, each from a different emotional angle:

1) curiosity gap, 2) specific number or result, 3) contrarian, 4) personal story, 5) direct statement, 6) question, 7) urgency, 8) lesson learned, 9) surprise, 10) framework.

Then rank them 1 to 10 by who would actually click, and tell me which audience each one is best for."

EXAMPLE

Input: Topic: "AI agents that work in production."

Output: Ten headlines ranging from "The math nobody tells you about AI agents" (curiosity) to "3 architectural mistakes I had to unlearn" (lesson) to "Your AI agents are failing at 59%" (specific result), each ranked and audience-mapped.

TIP

Pick the top three, then sit with them overnight. *The headline that still feels right in the morning is usually the one. The clever one at midnight rarely is.*

Prompt Five

The Audience Translator.

When you've written something for one audience and want to use it for another without rewriting from scratch.

THE PROMPT

"Below is a piece written for [Audience A]. Rewrite it for [Audience B] without losing the substance.

What stays the same: the core argument, any specific numbers, any specific examples.

What changes: tone, jargon, references that wouldn't land, and the specific way the takeaway is framed.

Original: [paste the piece]"

EXAMPLE

Input: A piece written for technical founders, translated for nonprofit operations leaders.

Output: Same argument, same numbers, same examples. Different opening, different vocabulary (no "production stack" or "throughput"), different closing call to action.

TIP

One piece becomes four. *Founder version, leader version, creator version, generalist version. Same substance, different doors. This is how you publish twice as much without writing twice as much.*

Prompt Six

The One-to-Many Repurposer.

After you ship a long-form piece and want to extract everything else from it.

THE PROMPT

"Below is my [blog post / newsletter / article / video transcript].

Extract from it: a 250-word LinkedIn post, a five-tweet thread, a 90-word Instagram caption with three quote-graphic options, a 100-word newsletter teaser, and a podcast episode outline.

Each piece should pull a different angle from the source so they don't repeat each other."

EXAMPLE

Input: A 1,500-word blog post on building AI agents.

Output: Five derivatives, each pulling a different angle: the math takeaway for LinkedIn, the unlearn list for Twitter, the philosophy for Instagram, the result-driven hook for the newsletter teaser, the structured deep-dive for a podcast.

TIP **Don't auto-publish.** *Use the outputs as drafts. The AI is good at extraction. You're better at making each piece feel native to its platform. Five minutes of polish per derivative is the difference between recycled and resonant.*

Prompt Seven

The Clarity Editor.

When you have a draft and want it sharper without losing the substance.

THE PROMPT

"Edit the draft below for clarity. Specifically:

- Cut filler words and hedge phrases ('I think', 'in my opinion', 'it's worth noting that') unless they earn their place
- Replace weak verbs with strong ones
- Simplify any sentence longer than 20 words
- Flag any sentence where the subject and verb are more than 5 words apart

Don't change my voice. Don't add anything new.

Draft: [paste the draft]"

EXAMPLE

Input: A meandering 600-word draft.

Output: A tighter 380-word version with the same argument, sharper verbs, and a few flagged sentences for you to decide on. Substance preserved, fat removed.

TIP **Run it twice.** *First pass for content, second pass for sentence-level. You'll catch different problems each time. The third pass is where you stop, even if you can still see things to fix.*

Prompt Eight

The Voice Restorer.

When AI helped you draft and the output sounds too smooth, too generic, too AI.

THE PROMPT

"Below is a draft written partly by AI. It's too smooth. Help me put my voice back into it.

Cut anything that sounds like 'In today's fast-paced world.' Cut every em dash. Cut 'It's important to note that.' Cut 'leverage' as a verb.

Add some small specific details only I would know to write. Keep one or two slightly imperfect sentence rhythms. Make it sound like a person, not a press release.

Draft: [paste the AI draft]

Voice reference: [paste a sample of your raw writing]"

EXAMPLE

Input: A polished AI draft with all the AI-tells (em dashes, hedging, smooth corporate cadence).

Output: A version with more texture, specific details, and one or two intentionally imperfect sentence rhythms. Reads like the person, not the model.

TIP *Always include a voice reference. A paragraph of your own raw writing tells the model more than any description ever could. Show, don't just tell.*

Prompt Nine

The Search Intent Finder.

When you want a piece to actually rank on Google or get found in AI search.

THE PROMPT

"I've written about [topic]. Help me figure out the search query someone would Google to find this.

Generate five different search queries in plain language: what someone would actually type, including hesitation words ('how do I', 'should I', 'is it worth').

For each query, tell me what the searcher is really hoping the result will say. Then tell me whether my draft delivers that or not."

EXAMPLE

Input: Topic: "Why your team isn't ready for AI."

Output: Five queries from "how do I tell if my team is ready for AI" to "is it worth investing in AI training," each with the underlying intent named. Your draft answers three of the five well, partially answers one, misses one entirely.

TIP

The intent is the thesis. *If your post doesn't answer what the searcher is really hoping for, rewrite the opening to address it directly. SEO works when the page is honest about what it solves.*

Prompt Ten

The Subject Line Splitter.

For newsletter sends. Five subjects from five emotional angles, ranked by likely open rate.

THE PROMPT

"I'm sending a newsletter about [topic]. Give me five subject line options, each under 50 characters, from a different emotional angle:

1) curiosity gap, 2) specific number or result, 3) contrarian, 4) personal story, 5) direct statement.

Tell me which two would A/B test best paired against each other and why."

EXAMPLE

Input: Topic: "What I learned shipping 15 AI agents."

Output: Five subjects: "The 59% problem in AI agents" (number), "What I'd tell agent #1" (story), "Most AI agent advice is wrong" (contrarian), and so on. The number-vs-story pairing is recommended for the A/B because they pull on different reader motivations.

TIP **Subject lines are 80% of open rate.** *Spend five minutes here, not thirty seconds. The difference between 38% and 52% open rates is one good subject line, not a better newsletter.*

02

Five angles for finding stories in *your work*.

You don't have a content problem. You have a capture problem. These five angles teach you to mine your existing work.

Most "content advice" tells you to come up with topics. That's the wrong job. The right job is noticing what's already worth saying inside the work you already do, and giving it a shape someone can read.

Each of these angles is a way of looking at one moment in your week. Pick the angle, write the post. Once you internalize the five, finding content stops feeling like a creative crisis and starts feeling like noticing.

Angle One

Behind-the-Scenes.

What's happening that no one sees.

BEST FOR

Service businesses, agencies, founders, consultants. Anyone whose process is normally invisible to the people buying from them.

THE HOOK PATTERN

Open with a sensory detail. Something you can see, hear, or touch. Specifics build trust faster than claims.

EXAMPLE

"Just packed away three months of camera tape from a documentary shoot. Five hard drives. Eleven hundred clips. Looking at them all in physical form changes how you see the project."

WHY IT WORKS

Trust comes from "they actually do real work." A behind-the-scenes post is proof of life, gentle authority, and an invitation to the reader to ask what you're working on. It also requires almost no creative energy. You just describe what you saw.

TIP

Take one photo a day of the work itself. *Setup shots, materials, drafts, the screen, the desk. By Friday you have five behind-the-scenes posts ready to write.*

Angle Two

The Lesson.

What you learned from a project that just shipped.

BEST FOR

Founders, consultants, operators. Anyone shipping work and updating their priors as they go.

THE HOOK PATTERN

Open with the misjudgment. The "wait, here's what was actually true" moment. Lessons land when you admit you used to think differently.

EXAMPLE

"Six months into building Impact Loop's CRM, I realized I'd been solving the wrong bottleneck the entire time. The lead capture wasn't broken. The follow-through was. Everything I built before that point was technically correct and strategically wasted."

WHY IT WORKS

Reads as a smart person updating their priors. Generous. Specific. Doesn't claim more than it knows. Audiences trust people who can describe being wrong about something concrete way more than people who only describe being right.

TIP

Save the lesson the day you learn it. *Not in your head. Write it down. The detail fades fast, and the post you'd write Monday is half as sharp as the one you'd write Friday.*

Angle Three

The Contrarian Take.

Where you disagree with the consensus in your space.

BEST FOR

Anyone with real expertise who has heard the cliché one too many times. Especially good for established practitioners.

THE HOOK PATTERN

State the conventional view first, then your inversion. The structure forces precision. You can't be vaguely contrarian.

EXAMPLE

"Most AI advice tells you to make your agents smarter. The agents I've shipped that actually work are the ones where the LLM is the dumbest part of the system. Push the decisions into deterministic code. Reserve the model for judgment only."

WHY IT WORKS

Differentiates you from generic content. Forces a position. The reader has to decide: agree or disagree, but they have to engage. Just be sure you actually believe the take. Performative contrarianism gets noticed once and then gets ignored.

TIP

Earn the take with a story. *Don't just state the inversion. Show the moment you realized the conventional view was wrong. Specificity is what makes a contrarian post different from a hot take.*

Angle Four

The Process.

How you actually do something.

BEST FOR

Operators, service providers, anyone whose process is the product. Especially powerful when the process is normally treated as a trade secret.

THE HOOK PATTERN

A specific workflow with a specific number. "Here's how I run X in Y steps." The number is the hook. The steps are the substance.

EXAMPLE

"Here's how I run a client kickoff for a \$50K storytelling engagement, in five questions. Most agencies skip step three. It's the one that actually decides whether the project ships on time."

WHY IT WORKS

Pure utility. Saves the reader time. Demonstrates competence without claiming it. The best version of this post leaves the reader feeling like they could try a piece of your process today, even if they would still want to hire you for the full thing.

TIP

Don't fear giving the process away. *The people who can copy your steps still won't copy your judgment. Process is teachable. Taste isn't.*

Angle Five

The Result.

What happened when you tried something specific.

BEST FOR

People who can show outcomes, even small ones. Especially the small ones, since they read more honest than the giant claims.

THE HOOK PATTERN

The result first. The how second. Numbers make hooks land harder. Even an honest "modest" number outperforms a vague big claim.

EXAMPLE

"Cut my email triage time by 73% this week. Eight hours back. One small Python script and one tightly-scoped LLM call. Here's what I changed."

WHY IT WORKS

Outcome-driven. Lets people opt in based on whether they want that specific result. Audiences scroll past tips. They stop for outcomes. The bar isn't 10x. The bar is "specific and verifiable."

TIP

Don't fake the number. *"Saved 73%" is more persuasive than "transformed our workflow," but only if it's true. The reader can smell rounded marketing math from a thousand feet.*

SECTION THREE

Event-to-content *checklist.*

Turn one event into twenty pieces of content. Tick the boxes as you go. Most of the work is capture, not creation.

BEFORE

Pre-event capture (15 minutes)

- ☐ Take a "before" photo of the room, set, or workspace
- ☐ Record a 60-second voice note: who's coming, what you hope happens, what you're nervous about
- ☐ Note 2-3 attendees you'd want to follow up with
- ☐ Take a wide shot of the agenda, materials, or run-of-show

DURING

In-the-moment capture

- ☐ 5-10 photos: 2 wide, 3-5 candid (audience reactions, hands raised, quiet moments), 1-2 close-ups, 1 of you working or presenting
- ☐ 30-second video clip of any moment that gets a strong audience response
- ☐ Voice memo any quote that lands. Yours or someone else's. Capture it before you forget the exact wording
- ☐ Note the questions people ask. These become future post topics on their own
- ☐ Note the moment you didn't expect: the breakthrough, the confusion, the off-script conversation

AFTER

Within 24 hours

- ☐ 60-second voice note: what surprised you, what you'd do differently, the one thing one person said that mattered
- ☐ 1-2 paragraph reflection: what changed for the audience, what changed for you
- ☐ List 3-5 specific moments worth turning into individual posts

WHAT THIS BECOMES

One event, twenty pieces of content

- 1 main recap post or LinkedIn article
- 3-5 "moment" posts (one per item from your post-event reflection list)
- 2-3 short video clips with captions
- 1 photo carousel
- 2-3 quote graphics from any landed quotes
- A future-topic queue from audience questions
- 1 newsletter section or full issue

SECTION FOUR

A weekly content system that *doesn't burn you out.*

Three pieces a week. Eighty minutes total. Every piece sourced from real work.

Sunday

Plan the week.

15 min

Look at what's scheduled. Pick three moments worth writing about (use the Story Capture Worksheet). Match each to a content angle. This isn't writing yet, just decisions.

Monday

Long-form. Ship the highest-substance moment.

30 min

Use the Voice Memo to Post prompt (#3) or sit and write. Aim for 600–1,200 words: long-form LinkedIn, a blog post, or a newsletter draft. Schedule for Tuesday morning.

Wednesday

Mid-form. Take the second moment.

20 min

250–500 word post, a thread, or a short article. Use the Story Angle Generator (#2) if you're stuck on framing.

Friday

Short-form. The third moment, compact.

15 min

Under 200 words. Could be a quote graphic, a single observation, a hot take, a bookmark–this list. Optional: one repurposed piece using the One-to-Many Repurposer (#6).

THE NON-NEGOTIABLE

Every piece comes from real work.

- Not abstractions. Not "5 tips" listicles. Not what you read on Twitter that morning
- If the week is dead, mine the previous week with the Story Capture Worksheet
- If you have nothing real, repurpose an older piece. Better than forcing
- Skip Friday before you fake it. Two real pieces beats three forced ones

Story capture *worksheet.*

A weekly 10-minute exercise to mine your real work for stories. Answer briefly. Voice memo, sticky note, doc, whatever.

1 What changed this week?

In your work, your team, your industry, your thinking. The change is the story.

2 Who said something useful?

A client, a colleague, a stranger, someone on a podcast. Quotes are content. Capture the exact wording.

3 What problem did you solve?

Big or small. The person you used to be a year ago would want to read about this.

4 What surprised you?

The unexpected outcome, the thing that didn't go as planned, the new pattern. Surprise is the material.

5 What's a small win worth marking?

The quiet wins matter. Naming them makes them real, and it helps your audience trust the bigger ones later.

6 What's a frustration you'd want others to know?

Vent productively. A frustration done well is a contrarian take in disguise.

7 What's a process that finally clicked?

Pure how-to gold. Worth a long-form piece.

8 What's a piece of advice you keep giving?

You're already saying it. Now write it down once.

9 What did you Google three or more times this week?

That's content the audience wants. They're Googling it too.

10 What's one thing you wish you'd known a year ago?

Past-you is future-you's audience. Always.

SECTION SIX

Where it *lives*.

A piece of content that wins on LinkedIn dies on X. Each platform rewards a different shape. Match the angle to the room.

LinkedIn

For founders and operators talking to their professional peers.

BEST FOR

Lessons, frameworks, contrarian takes, behind-the-scenes from real work.

CADENCE

2–3 posts per week. Depth over volume.

HOOK STYLE

Open with a specific moment or a number. Skip the throat-clearing.

X / Twitter

For real-time, hot-take, fast-cycle audiences.

BEST FOR

Threads, contrarian takes, observations, quote-worthy lines.

CADENCE

Daily presence. Lower-stakes per post.

HOOK STYLE

The first line lives or dies on its own. Front-load the surprise.

Newsletter

Your owned audience. The most valuable surface you have.

BEST FOR

Deeper teaching, single-idea essays, archive-worthy pieces.

CADENCE

Weekly is the sweet spot. Biweekly is fine. Monthly fades.

HOOK STYLE

The subject line is 80% of opens. Spend time there.

Blog

For evergreen, search-discoverable, compounding content.

BEST FOR

Long-form essays, frameworks, how-to guides, case studies.

CADENCE

Whatever you can sustain. Quality over quantity.

HOOK STYLE

Title doubles as your search bait. Match real Google queries.

YouTube

The longest-compounding authority asset you can build.

BEST FOR

Tutorials, frameworks, behind-the-scenes, breakdowns.

CADENCE

Weekly if you can. Quality over rush.

HOOK STYLE

The first 8 seconds decide. Open with the result, not the setup.

Instagram

For visual, personal, founder-as-human content.

BEST FOR

Carousels of frameworks, quote graphics, BTS, day-in-the-life.

CADENCE

2–4 posts per week. Reels weekly if doing video.

HOOK STYLE

The first slide is the hook. Stop the scroll or skip the post.

RULE **Don't post everywhere. Post deliberately on two.** *Pick one professional platform (LinkedIn or X) where your buyers spend time. Pick one owned platform (newsletter or blog) where the relationship deepens. Repurpose between them. Add a third only when the first two run on autopilot.*

SECTION SEVEN

Capture the *visuals*.

Half of visibility is what people see, not what they read. The good news: 90% of usable visual content is just paying attention with your phone in hand.

ALWAYS BE CAPTURING

Five rules for what to film and photograph.

- ☐ The wide shot of any room or workspace before something starts. Future you will use it as the opener for a recap post.
- ☐ People reacting, not posed. Hands raised, leaning forward, laughing. Engagement is the photo, not the speaker.
- ☐ Anything with text. Whiteboards, slides, notebooks, sticky notes. Text-in-image is shareable proof.
- ☐ The "before and after" of any work. Setup vs. teardown, draft vs. final, blank page vs. filled page.
- ☐ 30 seconds of B-roll: hands typing, walking shots, environment. Cheap to film, infinite in repurpose.

THE 5-FORMAT VIDEO

One shoot becomes five outputs.

If you're filming anything, plan the repurpose before the camera turns on. From a single 5-10 minute capture you should be able to extract:

- ☐ The flagship piece (3-7 min YouTube, podcast clip, or full LinkedIn video)
- ☐ Two short cutdowns (60-90 sec for Reels, Shorts, TikTok)
- ☐ One quote graphic from a specific line that landed
- ☐ One audio-only clip with captions for LinkedIn or X video
- ☐ A still image carousel pulling 3-5 frames or quotes from the video

PRODUCTION REALITY

You don't need a kit. You need a habit.

A modern phone shoots better video than a \$2,000 camera did five years ago. Lighting is the only thing that materially improves your output, and "near a window" handles 80% of cases. Sound matters more than picture: spend \$40 on a lavalier mic before you spend a dollar on anything else. The trap most founders fall into is buying gear instead of building the capture habit. The habit is the asset.

NOW WHAT

The work you're doing matters.

Make it visible.

If this kit is useful, the worst thing you can do is read it once and shelve it. Pin one prompt this week. Try one angle on one moment. Ship one piece using the weekly system.

Visibility doesn't compound from a perfect plan. It compounds from showing up small, consistently, around real work. That's the whole game.
